1. About NOVVES

1.1. Corporate Identity and Brand Story

On Thursday, August 1, 2019, in the Taşköprü district of Yalova, the first spark of NOVVES was ignited in a modest 150 m² workshop. This date represented far more than the establishment of a company; it marked the beginning of a vision, a dream, and a courageous step taken with belief by two brothers.

Since 2013, the experience we have gained in industrial ventilation and motor technologies has been shaped through research, real-world applications, and demanding engineering projects. This accumulation of knowledge became the core foundation that gave birth to the NOVVES brand in 2019.

**Engineering that controls
air, designs the future.**

This approach is the essence of our founding philosophy.

I, **Zeki Kadir ÖZÜNTÜRK** (Co-Founder & CEO), and my brother **Erdal ÖZÜNTÜRK** (Co-Founder & COO, Mechanical Engineer), embarked on this journey together as two engineers raised within the same family, the same culture, and the same disciplined mindset.

A Heritage of Discipline and Engineering Culture

We were born into a family with a naval background.

Our father served as a submarine petty officer in the Turkish Naval Forces. The atmosphere of a submarine — where silence, discipline, and life-critical responsibility coexist instilled in us, from an early age, calmness under pressure, meticulous planning, and systematic thinking.

Our mother, who received technical vocational education in Germany, taught us analytical thinking, precision, and respect for engineering details through her discipline and perfectionist approach. These two seemingly opposite, yet perfectly complementary influences — the determination of submarine discipline and the analytical intelligence of German engineering — shaped our character and our way of doing business.

We anchored our technical foundation in the Turkish ideal shaped by Atatürk's emphasis on science and reason. Our aim has never been merely to manufacture products; but to elevate Turkish engineering to the global stage, create a strong brand culture, and establish an engineering philosophy capable of shaping the invisible.

A Bold Brand Born in Years of Crisis

The year 2019 was a period marked by significant economic fluctuations both in Türkiye and around the world. Inflation, currency volatility, and a fragile global trade environment... Conditions that many companies perceived as risks became, for us, the starting point that tested our determination. The moment we powered up our very first fan in our small workshop in Yalova, it was not only a product that began to turn — it was our belief in the future.

Pandemic Years: We Did Not Stop, We Evolved

When the global pandemic began in 2020 and worldwide production came to a halt, we chose not to stop, but to redesign. We digitalized our engineering processes, expanded our R&D infrastructure, made our products competitive in international markets, and strengthened the foundations of NOVVES — a brand destined to become export-oriented. For us, the pandemic was not an obstacle, but a transformation period in which a new brand was rebuilt from the ground up.

Stability in a Turbulent Economy (2021 – 2022)

During the years when the global economy struggled to recover, Türkiye was characterized by high inflation and severe currency volatility. Yet NOVVES continued to grow — not by relying on external conditions, but by standing firmly on its own values.

February 6, 2023 Earthquakes:

The Wounds of a Nation

The devastating earthquakes of February 6, 2023 affected not only cities, but also the collective memory of an entire nation. As Türkiye fought to rebuild, NOVVES contributed to this recovery with its engineering capabilities. **That period reminded us once again: Stronger than steel is the human will to begin again.**

A New Balance: 2024 and Beyond

Even in a period where Türkiye adopted tight monetary policies and the world faced energy and supply chain crises, we continued to produce, innovate, and grow. Because the DNA of NOVVES is built on three words:

Stability — Innovation — Resilience

Today, **NOVVES** is a company that exports engineering solutions from Yalova to the world, producing:

- Industrial fans
- Motor technologies
- Fire safety systems
- Energy-efficient HVAC solutions

At the heart of this journey lies a single philosophy: “Shaping the Invisible” This expression is not merely a slogan; it is the very reason NOVVES exists. It represents our engineering philosophy a mindset that gives meaning to what is visible by mastering and shaping what cannot be seen in every design, every production stage, and every project.

Zeki Kadir ÖZÜNTÜRK
Co-Founder & CEO

“Engineering is the courage to turn curiosity into reality.”

NOVVES’s story is a story of courage. The courage to bring an idea, a drawing, a prototype into the world.

Since our founding, our goal has not been merely to produce, but to transform engineering—through knowledge, research, and consistency—into lasting value. To me, every product is not just a component, but the embodiment of a thought, a philosophy, and dedicated effort. Every fan and every system we produce—whether operating in a parking garage or a tunnel—serves the same purpose: precise engineering, high reliability, and sustainable efficiency. Our design process begins with a belief: true engineering is only possible by understanding what is unseen—by grasping the nature of air, energy, and motion.

Today at NOVVES, engineering is not just a profession; it is a culture. Behind every measurement, every blade, every data point, we seek meaning. Because we know technology alone is never enough—it is people who give it meaning. We unite innovative thinking with disciplined production, and engineering with art. Every idea emerging from the laboratory, every prototype tested in the field, moves us one step forward. For us, growth is not measured only in numbers, but in thought, vision, and people. And even today, we continue to work with the same excitement as the very first day. Because for us, designing air is not merely a technical process—it is a promise to the future.

Erdal ÖZÜNTÜRK
Co-Founder & COO – Mechanical Engineer
Engineering Vision. Built with Discipline.

Born to flow

1. 2. Vision, Mission and Values

Our Vision

To become a globally trusted engineering brand in industrial ventilation, motor technologies, and HVAC solutions by combining the discipline of Turkish engineering with the innovative approach of global technology. NOVVES aims to carry energy efficiency, safety, sustainability, and high-performance engineering into the future; not only by directing the air, but by shaping the invisible.

Our Mission

To design and engineer air, energy, and motion in ways that improve human life by developing long-lasting, reliable, and sustainable technologies. In all our processes, we uphold the principles of:

- Quality
- Ethical engineering
- Innovation
- Transparency and reliability

All our workflows — from R&D to prototyping, from production to after-sales — are built upon the philosophy of “**Stability – Innovation – Resilience.**”

Value	Description
Discipline	We manage all processes in a planned, controlled, and meticulous manner, placing stability at the core of our corporate culture.
Engineering Excellence	Our products are the tangible result of calculated design, measured performance, and proven reliability.
Innovation	We focus on continuous improvement. For us, innovation begins not only in products, but in our mindset.
Reliability	We stand behind every promise we make and deliver the quality we commit to under all conditions.
Sustainability	We prioritize energy, resource, and time efficiency, applying production models that respect both the environment and the future.
National Pride & Global Vision	We unite Turkish engineering with global standards, producing world-class quality with local discipline.
Integrity & Ethics	Transparency, fairness, honesty, and professional responsibility are the foundation of all our business relations.

**“Sales is not about persuasion;
it is the art of aligning
engineering intent with real
needs in the right way.”**

At NOVVES, sales does not begin with explaining a product—it begins with understanding the project.

Every project has its own technical conditions, usage scenarios, and operational realities. My responsibility is to read these realities accurately and translate engineering solutions into the field in the most appropriate way. For me, sales management is not volume-driven, but value-driven. Instead of short-term gains, I prioritize building long-term relationships based on trust. For this reason, every proposal presented at NOVVES represents a technically validated engineering commitment—aligned with production capabilities and cost structures, and fully accountable. At NOVVES, the sales process never operates in isolation. It is carried out in continuous coordination with engineering, production, and cost management. Every promise made in the field is ensured to have a concrete counterpart in the factory. Representing the NOVVES brand goes beyond presenting a price—it means delivering the right product to the right project, at the right time, with the right responsibility.

We do not focus on persuasion in sales; we think together, solve together, and deliver together.

Kübra ÇAĞDAŞ SOYARIK
Sales Operations Manager
Where Engineering Meets Real Needs.

Born to flow

Our Engineering Philosophy

For us, engineering is not merely calculation and design; it is a matter of character, discipline, and responsibility.

Every fan, every motor, every system is the tangible reflection of:

- an idea,
- a design,
- a craft,
- and a belief.

This is why we never say “we produce.” We say “we shape.” Because NOVVES does not simply work with air; NOVVES designs the engineering that controls the air.

1. 3. NOVVES Product Families Origami Design Philosophy

NOVVES expresses its product portfolio not only through technical performance, but also through a unique design language. Each product family is represented by an animal theme that reflects its own character, and these themes are visualized through modern origami-style icons. This approach unites **NOVVES'** engineering culture with three fundamental principles:

001

Nature: The Source of Aerodynamic Form

The anatomy of animals embodies qualities that directly correspond to engineering: speed, efficiency, power, resilience, precision.

For this reason, each animal symbolizes the technical philosophy of the product family it represents. Examples:

- Tiger – Air Handling Units (AHU): Power, durability, dominance
- Dragonfly – Smoke Exhaust Fans: Lightness, quick response, high maneuverability
- Marlin – Axial Fans: High speed, low friction, aerodynamic flow
- Hummingbird – EC Fans: Energy efficiency and precise control
- Bear – ATEX Fans: Adaptation and safety in harsh environments
- Owl – Wall Fans: Quiet operation and the metaphor of night vision
- Nautilus – Centrifugal Fans: Spiral flow and high-pressure generation

002

Origami: The Aesthetic of Engineering Simplicity

All NOVVES icons are designed in an origami-inspired style.

Origami represents:

- Precise geometry
- Clean, defined lines
- Forms purified from excess
- Mathematical simplification

This is fully aligned with the engineering philosophy of NOVVES: **“Every form that directs the air must first be simplified; then it gains strength.”** Origami-style icons symbolize aerodynamics, modularity, and minimal design

003

Color Philosophy : NOVVES Orange (Engineering Orange)

Every origami icon is crafted using NOVVES' corporate color: **Engineering Orange.**

This color symbolizes:

- Energy
- Momentum
- Engineering dynamism
- Intelligence and innovation

Why Are Product Families Represented by Animals?

NOVVES chose this visual language for three reasons:

1. To express a complex technical world through simple yet powerful

symbols: Even someone who is not an engineer can instantly understand a product family just by looking at its icon.

2. To create a memorable brand system in the global market

Animal theme: Origami form: Orange design. This combination is truly unique in the world.

3. To allow each product family to express its own character

For example: The Tiger AHU series conveys a sense of quiet strength and dominance. The Hummingbird EC series evokes energy efficiency and lightweight power.

How Does This Design System Create Global Advantage?

- Project managers can instantly distinguish product families
- Distributors benefit from simplified catalog design, stock management, and presentations
- Icons provide rapid recognition across digital platforms (e.g., PerfectusAir)
- The brand's institutional memory is strengthened
- A premium unity is created between the **NOVVES** logo and the product icons

This system transforms **NOVVES** from a traditional fan manufacturer into a design-driven engineering brand.

2. Corporate Governance

2. 1. International Compliance & Anti-Bribery Systems

2. 1. 1. United Nations Anti-Corruption & Anti-Bribery Manifesto

NOVVES upholds a corporate identity founded on ethics, integrity, and transparency in the global business environment. All our operations are governed with a zero-tolerance policy against bribery, corruption, improper advantages, and conflicts of interest — fully aligned with the regulations of the United Nations, OECD, and the U.S. FCPA

2. 1. 2. UN Global Compact – Principle 10

“Businesses should work against corruption in all its forms.”

NOVVES is fully committed to the anti-corruption principles defined in Principle 10 of the United Nations Global Compact. Within this framework, we adhere to:

- A clear and explicit stance against all forms of corruption
 - Zero tolerance for bribery, extortion, embezzlement, and unethical practices
 - Requiring the same ethical standards from all partners and suppliers
- These principles form the ethical foundation of our corporate structure.

2. 1. 3. OECD Anti-Bribery Convention Compliance Policy

NOVVES fully complies with the OECD Convention on Combating Bribery in International Business Transactions and commits to adhering to these principles.

Implemented policies include:

- **Gift & Hospitality Limits:** All gifts, hospitality, and benefits that may influence commercial decisions are strictly limited and fully documented.
- **Commission Transparency:** All agency fees, commissions, and intermediary payments, domestic or international, are managed with complete transparency and proper documentation.
- **Third-Party Due Diligence:** Distributors, agents, and suppliers undergo ethical risk assessments and KYC (Know Your Customer) procedures.

2. 1. 4. FCPA (Foreign Corrupt Practices Act) Compliance Commitment

In all transactions involving public projects, government institutions, and official authorities, **NOVVES** conducts its activities in full compliance with the **U.S. FCPA** regulations.

This includes:

- Absolute prohibition of improper payments to public officials
- Full transparency throughout project processes
- Accuracy in documentation, reporting, and technical records
- It is a mandatory company policy that all intermediaries, agencies, and representatives operate in full compliance with the FCPA.

2.1.5. NOVVES Anti-Bribery & Integrity Code

NOVVES defines its ethical conduct standards clearly for all employees and business partners through its internally established Anti-Bribery & Integrity Code. The principles adopted within this framework include:

Full Transparency in Procurement and Sales Processes: All quotation, bidding, tendering, and purchasing processes are traceable, auditable, and fully documented.

Zero Tolerance for Bribery, Embezzlement, and Improper Advantages: Any behavior providing an improper benefit results in strict disciplinary action and contractual sanctions.

Employee Training: All employees receive regular training on ethics, conflict of interest, gift policy, and anti-corruption practices.

Whistleblowing Hotline & Confidentiality Protection: Any unethical behavior may be reported anonymously; the confidentiality of whistleblowers is fully protected.

NOVVES encourages employees and stakeholders to report any suspected unethical behavior or conflicts of interest through anonymous reporting channels. The identity of individuals submitting reports and the information they provide are protected in accordance with confidentiality principles, and all reports are reviewed with strict impartiality. Ethical violation and impartiality reports can be submitted to ethics@novves.com

2.2. Impartiality Manifesto

NOVVES, adopts a working culture that is fair, independent, objective, and free from conflicts of interest in all its activities. Impartiality is one of our fundamental ethical principles across engineering design, production, testing, tendering, certification, procurement, purchasing, and partnership processes.

2.2.1. Principle of Objectivity

- Technical decisions are based solely on scientific data, international standards, and verifiable test results.
- No employee, customer, supplier, distributor, or project partner may exert pressure to influence technical processes.
- All technical reports, analyses, and performance evaluations are conducted independently of third-party influence.

2.2.2. Conflict of Interest Policy

- Employees and managers may not participate in any decision-making process where personal interests may conflict with company interests.
- Supplier or project selection cannot be influenced by personal relationships, gifts, commissions, commercial pressure, or favoritism.
- Potential conflicts of interest must be declared and are evaluated confidentially.

2.2.3. Fair Competition Principle

- All customers, countries, and distributors are treated equally.
- No discrimination is made between clients within the same segment.
- Sharing confidential information that may provide competitive advantage ("back-channel communication") is strictly prohibited.

2.2.4. Impartiality in Engineering and Testing Processes

- Fan performance tests, motor tests, acoustic measurements, **CFD** analyses, and quality inspections are not influenced by commercial concerns.
- All testing procedures are conducted in accordance with **AMCA, ISO, EN, ATEX, and GOST-R** standards.
- Test results cannot be manipulated; reports are issued with full data integrity.

2.2.5. Equality of Customers and Suppliers

- Customers, suppliers, or project partners are never discriminated against based on country, region, language, religion, gender, ethnicity, political view, or social status.
- Suppliers are evaluated based on objective criteria: quality, delivery performance, cost, sustainability, and ethical compliance.

2.2.6. Impartial Work Environment & Employee Equality

- Discrimination, nepotism, and favoritism among employees are strictly prohibited.
- Promotions, role changes, and performance evaluations are based entirely on measurable criteria.
- Gender equality, equal opportunity, and an inclusive working culture are core company policies.

2.2.7. Transparency & Accountability

- All processes are documented, auditable, and recorded.
- Internal and external audits provide traceable, verifiable, and explainable data.
- Any attempt to violate impartiality is subject to zero-tolerance enforcement.

2.2.8. Whistleblowing – Ethical Reporting Rights

- Every employee, supplier, and business partner has the right to report unethical behavior anonymously.
- No retaliation may be taken against whistleblowers; confidentiality is fully guaranteed.
- All reports are evaluated independently by the Ethics Committee.

2.2.9. Compliance with International Frameworks

The **NOVVES** Impartiality Manifesto is fully aligned with the following international ethics and governance frameworks:

- UN Global Compact – Principle 10 (Anti-Corruption)
- OECD Anti-Bribery Convention & Guidelines
- FCPA – Foreign Corrupt Practices Act
- ISO 37001 – Anti-Bribery Management System
- ISO 26000 – Social Responsibility
- ISO/IEC 27001:2022 – Information Security (Integrity & Impartiality)
- ISO 37002 – Whistleblowing Management System
- EAEU Technical Regulations (EAC / GOST-R compliance frameworks)

2.3. Engineering Ethics and Technical Transparency

2.3.1. Engineering Ethics and Professional Practice Standards

NOVVES, carries out all engineering activities in full adherence to international ethical values. From design to production, and from testing to after-sales support, every process is governed by the principles of transparency, safety, scientific accuracy, and professional responsibility. Our goal is not only to produce high-performance products, but also to fulfill the engineering profession's responsibility to society without compromise.

2.3.2. Safety-Focused Design Principles

For **NOVVES**, human safety is the highest priority in engineering. All our products are designed in accordance with international standards, based on fire safety, electrical safety, mechanical integrity, emergency scenarios, and comprehensive risk analyses.

- Defining safety factors from the earliest design stages
- Scenario-based engineering for fire, explosion, and emergency conditions
- Zero compromise on safety under any circumstances
- Verification of test results through independent laboratories

2.3.3. International Ethical Codes (NSPE – FEANI – IEEE)

NOVVES, embraces global engineering ethics standards.

All engineering activities are conducted in accordance with the following ethical principles:

- **Transparency:** Sharing information accurately, completely, and in an understandable manner
- **Scientific Integrity:** Data-driven decision-making; complete honesty in measurements and analyses
- **Public Safety:** Prioritizing the safety and welfare of society in engineering decisions
- **Professional Integrity:** Avoiding misleading information or concealing errors; zero tolerance for unethical behavior

This approach is a fundamental standard not only in our products, but also in documentation, marketing materials, test reports, and project management processes.

“At NOVVES, cost is a strategic management discipline that creates value through **accurate engineering and precise scheduling.**”

Figures are measurable outcomes of product and process decisions.

Cost evaluations are addressed together with product performance, production flow, and continuity of quality. Through data-driven systems, we manage resource utilization in a transparent, measurable, and sustainable manner. At NOVVES, cost analysis is one of the fundamental pillars of strategic decision-making. This structure—balancing time, quality, and cost simultaneously—supports the company’s stable and long-term growth. Cost management at NOVVES does not merely secure today; it safeguards the future. The right cost, strong products, a sustainable future.

Elif MUTLU

Cost Control Manager

The Right Cost. Strong Products. A Sustainable Future.

Born to flow

2.3.4. Technical Transparency

NOVVES, enforces a strict zero-tolerance policy against any form of data manipulation in engineering processes.

- Test results are never altered
- Performance values are reported only from actual measurements
- Technical drawings and calculations are clearly documented
- Product declarations **(CE, EAC, ATEX, CPR, ISO)** contain fully verifiable information

This policy reflects our commitment to engineering discipline and our responsibility toward our customers.

2.3.5. Ethical Decision-Making Scenarios

In challenging engineering situations, ethical decisions are evaluated based on safety, scientific accuracy, and societal responsibility. The **NOVVES** team adheres to international ethical rules in situations such as conflicts of interest, decision-making under pressure, cost-versus-safety dilemmas, and inconsistencies in test results.

This approach is reinforced through regular internal ethics awareness training and scenario-based decision-making exercises.

2.3.6. Ethical Approach in the Product Life Cycle

NOVVES, manages the entire life cycle of its products in accordance with ethical principles:

- **Design:** Engineering based on scientific data, with safety as the primary priority
- **Production:** Controlled processes that do not harm human health or the environment
- **Testing:** Verification of results through independent laboratories
- **Sales:** Transparent technical communication without exaggerating performance values
- **Usage:** Training, documentation, and sustainable maintenance support
- **End of Life/Return:** Use of recyclable materials and environmentally responsible production models

This approach demonstrates that NOVVES is not only a company of engineering excellence, but also a brand that carries a deep culture of ethical responsibility.

NOVVES Ethical Commitment

Impartiality, honesty, and transparency are integral parts of the NOVVES engineering culture..

3. Corporate Digitalization and Process Management Infrastructure

NOVVES, supports its operations not only with physical production capabilities but also with modern digital management systems. All workflows are managed in an integrated structure through ERP, MES, digital quality systems, and corporate training platforms. This digital ecosystem strengthens **NOVVES'** culture of transparency, traceability, speed, and engineering efficiency.

”

NOVVES Elektrik Motor A.Ş. views sustainability, quality, and occupational health and safety as an integrated system, and continues to create value by reflecting this integrated management approach across all its processes.

3.1. Microsoft Dynamics 365 – ERP Integration

All corporate processes of **NOVVES** are managed through the Microsoft Dynamics 365 ERP infrastructure.

This system unifies the company's operations under a single platform:

- Production planning
- Material management (BOM, MRP)
- Procurement & supply chain
- Inventory & stock control
- Finance & accounting
- Sales – quotation – order management
- Quality processes
- Service & warranty tracking

All products within the ERP system operate in full integration with:

- Bill of Materials (BOM)
- Material specifications
- Operation cards
- Product coding structure (400.10.20.0001)

Microsoft Dynamics enables the entire team — from production to management — to access the same data in real time, strengthening a culture of accurate and timely decision-making.

3.2. MES – Manufacturing Execution System (Digital Production Management)

The **NOVVES** production floor is managed through a modern MES (Manufacturing Execution System) infrastructure.

With this system, the following processes are fully digitalized:

- Digital work orders on the assembly line
- Recording of torque values and assembly parameters
- Real-time production monitoring
- Machine operating–downtime analysis
- Digital quality control forms
- Traceability (serial number – lot – QR)
- Automatic reporting of cycle times

The MES infrastructure enables the creation of a “digital twin” for every fan and motor produced. This guarantees **NOVVES'** global-level quality assurance.

3.3. NOVVES Corporate Training Platform – Udemy Business

NOVVES, adopts a modern and continuous training model for the development of its employees. In this context, a corporate partnership has been established with Udemy Business. All employees have unlimited access to training programs in:

- Engineering
- Software development
- Management
- Quality systems
- Production
- Project management
- Technical certification programs
- ERP & MES training

Through the platform, each employee's:

- Personal development plan
- Technical training library
- Certification progress
- Engineering competency development is digitally managed.

This model strengthens NOVVES' identity as an engineering company that invests in people and knowledge.

4. Sustainability & Environmental Impact Management

“Every NOVVES fan works for a cleaner future.”

At NOVVES, we do more than manufacture high-performance fans, we embrace a production philosophy that invests in the future of our planet. Energy efficiency, long-life design, recyclable materials, and a low-carbon strategy form the foundation of all our product development and manufacturing processes. The high efficiency of our fans not only reduces operating costs but also directly contributes to climate action by lowering carbon emissions.

Our eco-friendly production methods, efficiency-focused resource usage, and waste minimization reflect our commitment to sustainable industrial solutions.

SDG 11 Sustainable Cities and Communities

Our energy-efficient fan technologies support smart city applications, metro and tunnel ventilation, and environmentally friendly air circulation in residential and commercial projects. Across manufacturing and logistics, we implement waste reduction, energy optimization, and environmentally responsible operational principles.

SDG 12 Responsible Production and Consumption

NOVVES, develops products that deliver higher efficiency with fewer resources. Through recyclable materials, efficient motor technologies, optimized supply chains, and long-life product designs, we help reduce emissions that contribute to global warming.

SDG 13 Climate Action

Reducing our carbon footprint is a core element of our company strategy. We develop sustainable HVAC solutions through: High-efficiency fans, low-power, EC motor technologies, durable, long-life systems All our work aligns with the Paris Climate Agreement and global climate targets. We continuously invest in climate-friendly production technologies.

Environmentally Responsible Production Model

- Use of recyclable metals and components
- Low-VOC coating and painting systems
- Production in compliance with ISO 14001 Environmental Management Standard
- Energy-efficient motors and aerodynamic fan designs
- Smart engineering that provides lower carbon emissions

NOVVES Commitment to a Sustainable Future

NOVVES leverages technology not only for performance, but also to fulfill its environmental responsibility and to help build a sustainable world for future generations. Every NOVVES fan contributes to a cleaner, safer, and more sustainable future.

Fighting CO₂ Emissions: “Purifying your air means protecting your future.” Through its high-efficiency fan technologies, NOVVES directly contributes to reducing carbon emissions by lowering the energy consumption of industrial and commercial facilities. Thanks to aerodynamic optimization, efficient motor technologies, and low-loss housing designs, our fans consume significantly less energy compared to traditional systems — providing a more sustainable operational infrastructure. According to independent calculations, while a conventional fan system causes substantial annual CO₂ emissions, NOVVES high-efficiency designs can reduce these emissions by up to 40%.

Annual Energy and Carbon Savings
(Example Based on 10 MW Total Fan Power)

The annual environmental and economic benefits provided by NOVVES high-efficiency systems:

- 15,384,615 kWh less energy consumption
- 6,153,846 kg CO₂ less atmospheric emissions
- ≈ 38,461,538 TRY reduction in electricity costs (2.5 TRY/kWh)
- Equivalent to ≈ 9,050 barrels of oil saved
- Lower operating costs and longer fan lifespan

These values represent typical results obtained in large industrial plants, shopping malls, parking ventilation systems, metro/tunnel projects, hospitals, and public buildings.

Our Contribution to Carbon Footprint Reduction

The energy savings provided by NOVVES fans represent not only economic gains, but also a concrete contribution to global climate action.

In a ventilation system operating with 10 MW installed capacity, NOVVES technologies can prevent over 6.1 million kg of CO₂ emissions annually — equivalent to the energy content of approximately 9,050 barrels of oil.

With NOVVES technology, carbon reduction enhances both operational and environmental sustainability.

How We Achieve This

The carbon-reduction impact of **NOVVES** fans is based on the following engineering principles:

- High-efficiency blade and motor design
- Low-turbulence airflow and minimized internal losses
- Full compliance with ErP and EcoDesign requirements
- Optimal aerodynamic geometries enabling energy conservation
- Long-life, recyclable material use

The Right Choice for Sustainable Businesses

Reducing carbon emissions is not only an environmental requirement — it is also a strategic element of sustainability and cost management for any modern enterprise.

NOVVES prioritizes carbon reduction throughout its entire value chain:

from product design to manufacturing, from logistics to operational processes.

Corporate Message

“Energy efficiency is not only a cost advantage; it is a responsibility for the continuity of businesses and for the planet.”

Recycling and Material Efficiency “We are taking action for a cleaner future.”

At **NOVVES**, we do more than direct airflow, we aim to minimize environmental impact, optimize resource usage, and leave a livable world for future generations across all stages from production to logistics. Our production philosophy places circular-economy principles and material efficiency at its core.

Recycling-Oriented Production Policy

In alignment with the United Nations SDG 12 – Responsible Production and Consumption, **NOVVES** applies recyclable material usage, long-life product design, and minimum-waste strategies across its design and production processes. **NOVVES'** green manufacturing approach includes: High recyclability rates, long-life and repairable product design, climate-friendly production lines and low-VOC applications, optimized material use and controlled scrap generation

98% Recyclable Fan Systems **NOVVES** fans achieve recyclability rates of up to 98% at the component level. Bodies and parts made from stainless steel, galvanized steel, aluminum, and recyclable polymers can be fully reintegrated into the material cycle at the end of their service life. This approach ensures: Accelerated green transformation in production, reduced scrap generation, improved waste classification processes, increased environmental awareness across the supply chain, lower pollutant emissions. **NOVVES is a pioneer in design, material selection, and process control required for circular manufacturing.**

FOR A SUSTAINABLE FUTURE **NOVVES**

Combating CO₂ Emissions

4.1. Young Engineer Development Programs

NOVVES, invests in the development of talented young engineers.

Through university collaborations, internship programs, R&D-focused training, and mentorship initiatives, young engineering candidates gain real-world industry experience.

Our programs create a learning ecosystem that supports innovation, enhances technical capability, and prepares future engineers for the sector.

4.2. Social Contributions

NOVVES, considers social benefit as an integral part of its corporate responsibility.

The company supports projects in education, science, and technology; participates in initiatives that increase scientific awareness among young people; and contributes to the promotion of sustainability, environmental awareness, and engineering culture within society.

5. Production Facilities

NOVVES' production center operates within a 3,250 m² integrated factory in Yalova, designed in accordance with modern engineering standards.

The facility is equipped with an optimized infrastructure for manufacturing high-precision industrial fans, motors, and HVAC systems.

Technical capabilities of our factory:

- **AMCA 210 / ISO 5801 compliant performance test laboratory**
- **AMCA 250 / ISO 13350 jet fan thrust test laboratory**
- **R&D high-temperature endurance chamber developed for EN 12101-3 (F200-F400) scenarios**

• **Sheet Metal Processing Workshop:**

Fiber laser cutting, CNC press brake, rolling, and precision manufacturing equipment

• **Welding Technologies Workshop:**

Laser welding, MIG/MAG welding, and robotic welding systems

• **Assembly & Balancing Lines:**

High-precision production lines for axial, radial, jet fan, motor, and AHU modules

• **Quality Verification Infrastructure:**

Vibration, acoustics, corrosion, electrical and mechanical test systems

This modern infrastructure demonstrates that every **NOVVES** product is manufactured in accordance with verifiable engineering standards.

“A Signature Approach That Leaves a Mark: The Signature of Supply”

How strong is a factory?

Is it defined by the capacity of its machines—or by the resilience of its supply chain?

At **NOVVES**, the answer is clear: quality is proven in the field, but its destiny is determined at the very first stage—raw material selection.

BUILT ON STANDARD INPUTS

The visible face of production is the factory floor. However, the true critical point is shaped where no one sees it—at the procurement table. Every material choice, every supplier agreement, and every quality criterion is a strategic decision that impacts the entire system. Within the **NOVVES** approach, no item is treated as a mere cost line. Every preference is considered a foundation for production continuity, quality consistency, and operational resilience. **Because we know this: intervening when a problem reaches the field is always more costly than preventing a crisis at the supply stage.**

THREE PILLARS: FORESIGHT, CONTINUITY, RESILIENCE

01 — Risk Foresight: Market fluctuations, supplier instability, logistics disruptions—these are not possibilities; they are realities. **NOVVES'** supply strategy positions itself proactively against these realities.

02 — Supply Continuity: When a production line stops, the loss is not limited to time. Customer trust, market position, and operational momentum are all put at risk simultaneously. For us, continuity is not a reaction—it is discipline.

03 — System Resilience: Not depending on a single supplier, a single route, or a single scenario. This is not flexibility—it is layered security. Every connection is designed together with its alternative.

THE AXIS OF TRANSPARENCY AND TRUST

The **NOVVES** supply philosophy believes in long-term partnerships rather than short-term gains. Our suppliers are business partners—stakeholders who create value throughout the process, share responsibility, and operate with transparency. This perspective not only safeguards today's production, but also builds systemic resilience against the uncertainties of tomorrow.

6. International Sales Network

NOVVES, is part of a multi-regional sales and partner network in the global HVAC and ventilation industry. We operate across the Middle East, Europe, Asia, and Africa through both distributor partnerships and direct project-based supply models.

Our international operational structure is based on the following principles:

- **Regional Partner Model**

Certified distributors who have completed all technical training programs

- **Direct Project Management**

Engineering-driven project execution in tunnels, metros, shopping malls, hospitals, public buildings, and industrial plants

- **Centralized Technical Support**

CFD analyses, product selection, and technical documentation provided from our engineering headquarters in Yalova

- **Controlled Growth Strategy**

Global expansion managed through market selection, partner performance criteria, and sustainable growth principles. This structure transforms **NOVVES** from a traditional manufacturer into a technology brand that delivers engineering solutions on an international scale.

“We believe that the path to emerging stronger from crises runs through value-added production and exports.”

Because sometimes, everything may move in the opposite direction in order to reach the right goal.

For us, exports are not merely a commercial activity; they are a journey of hope, responsibility, and building the future. As the first company to introduce animal-themed identities into product and model naming, NOVVES reflects the inspiration we draw from nature into our products through technical excellence.

Every step we take with this belief is shaped by the goal of creating value for our country, making a difference globally, and advancing Turkish engineering on an international scale.

Burcu POŞPOŞ

International Sales & Marketing Manager
From Local Engineering to Global Impact.

7. Reference Projects

NOVVES products are actively used in projects of varying scale and complexity around the world.

Our systems are preferred in:

- Infrastructure & transportation projects (tunnels, metro ventilation)
- Shopping malls and commercial buildings
- Industrial facilities and factory campuses
- Residential & mixed-use developments
- Public buildings, hospitals, educational facilities

Each project is re-analyzed based on airflow, pressure, sound levels, energy efficiency, and fire-safety requirements.

Product selection is based not only on catalog values but on:

- Actual test data
- Project specifications
- CFD analyses
- Acoustic & aerodynamic optimization

This approach elevates **NOVVES** from being just a “manufacturer taking orders” into an engineering-focused solution partner.

8. R&D and Engineering Competencies

NOVVES maintains an advanced infrastructure for testing, simulation, R&D, and product validation to develop high-reliability fan systems, HVAC equipment, and energy-efficient ventilation solutions. All design, prototyping, and verification processes are carried out in full compliance with **AMCA, ISO, EN, and region-specific GOST R standards**.

We also collaborate with accredited international laboratories (**AMCA, TÜV, Applus, Intertek, etc.**) for certification and third-party performance validation.

AMCA 210 / ISO 5801 – Performance Test Laboratory

Airflow rate, static/total pressure, power consumption, and fan efficiency are measured according to AMCA 210 / ISO 5801.

Tests are conducted using the AMCA 210 Figure 15 setup.

Key parameters monitored:

- Airflow (m³/h)
- Static and total pressure (Pa)
- Power consumption (kW)
- Fan efficiency (η%)

“Not Sales, But a Partnership in Solutions”

At **NOVVES**, the primary role of field sales is not simply to “sell a product.” For us, true success is defined in three steps: identifying the right need, implementing the most suitable solution for the project, and ensuring flawless system performance in the field. Our sales philosophy is built on three core pillars: technical accuracy, transparent communication, and sustainable satisfaction.

Sales Driven by Engineering, Not by Catalogs

One of the biggest challenges in the industry is that project specifications, on-site realities, and operational expectations do not always align. At this point, the **NOVVES** sales team is not a unit that merely “reads catalogs,” but one that understands design language, comprehends automation logic, and anticipates risks while they are still on the table. We continuously refine our solutions through airflow engineering, a strong testing culture, and direct feedback from the field. We prioritize adding value to projects—especially in design interpretation, implementation details, and automation integration. Because we know this: customers do not purchase a single fan or piece of equipment; they invest in a living system. Proper scenario design and correct commissioning processes are critical elements that determine return on investment (ROI) as much as operational safety.

Our Field Sales Principles

Clarify the Need: Analyze risks, usage scenarios, and architectural constraints in line with applicable standards; **Simplify the Solution:** Reduce unnecessary complexity to establish the most applicable and efficient structure in the field; **Prove the Value:** Deliver clear benefits based on performance, safety, and total cost of ownership; **Stay Beyond Delivery:** Take responsibility at every stage—from proposal to production, from shipment to after-sales service.

A Future Built on Discipline and Values

With field discipline rooted in a military heritage, we consider it a matter of corporate honor that every commitment we make is fully realized in the field. **Guided by the values of the Republic and aligned with Atatürk’s principles of reason and science, we adopt a modern working culture—both within our teams and in our customer relationships.** We believe that corporate trust is built most strongly during the most challenging moments and directly in the field. As **NOVVES**, our fundamental goal is that at the end of every project, our customers feel this clearly:

“This team did not merely sell a product; they became a true solution partner, ensuring our system operates safely and reliably in the field.”

İlker GÜL

Project Sales Manager

Born to flow

Our laboratory has a testing capacity of up to 165,000 m³/h. This infrastructure enables: Validation of new fan designs, auxiliary fan selection, project-specific performance simulations, energy efficiency assessments

AMCA 250 / ISO 13350 – Jet Fan Thrust Testing:

Jet fans used in tunnel ventilation must deliver high thrust (N) to extract smoke effectively during emergencies. For this purpose, a jet fan test setup compliant with AMCA 250 / ISO 13350 has been established at our facility.

Capabilities Include: Precision thrust measurement, test platforms simulating tunnel installation conditions, real-time data acquisition, thrust-airflow-pressure optimization analyses. This system ensures that jet fan selections comply with fire-safety regulations and emergency ventilation standards.

EN 12101-3 – Fire Resistance Test Infrastructure (F200 / F250 / F300 / F400)

To validate the performance of smoke and heat exhaust fans under high-temperature conditions, NOVVES has developed an EN 12101-3-compliant fire resistance test infrastructure for R&D purposes.

Temperature endurance scenarios:

- F200: 200 °C for minimum 120 minutes
- F250: 250 °C for minimum 120 minutes
- F300: 300 °C for minimum 60/120 minutes
- F400: 400 °C for minimum 120 minutes

Test environment features:

Controlled temperature rise using a simulation furnace; Real-time thermal monitoring with heat sensors; Digital recording of motor, housing, and performance data.

Note: This system is for R&D validation only. Official certification tests are performed in accredited independent laboratories.

R&D Contributions:

Pre-testing of fire resistance for new fan designs
Material and insulation optimization
CE certification preparation
Design improvement through real-time data feedback

Air Handling Unit, Heat Recovery Unit & Heat Pump Test & R&D Infrastructure EN 13053 – AHU Performance and Energy Efficiency Testing

NOVVES air handling units are designed and validated in accordance with EN 13053, Europe's reference standard.

Validations performed:

- Airflow & external static pressure performance
- Fan energy efficiency (SFP classes)
- Heating-cooling coil heat transfer efficiency
- Filter pressure drop & ISO 16890 classification
- Heat recovery unit efficiency testing
- Casing strength & air leakage class (L1-L3)
- Acoustic performance & sound power levels

These tests are used for both R&D development and design verification.

EN 13141 Series – Heat Recovery Ventilation Units (HRV/ERV)

Our energy recovery systems are tested according to the following international standards:

- EN 13141-7: Ducted HRV/ERV systems
- EN 13141-8: Residential heat-recovery ventilation units
- EN 308: Heat exchanger efficiency
- EN 13141-9: Central ventilation systems

Key parameters monitored:

- Sensible/enthalpy heat recovery efficiency
- SFP / fan energy classes
- Airflow, pressure drop & leakage
- Condensation tests and drainage behavior
- Frequency-band sound measurements

Heat-Pump-Based Heat Recovery Systems – Thermodynamic Testing

A dedicated thermodynamic test infrastructure is used for developing heat-pump-based HRV/ERV systems.

- Parameters tested:
- COP / EER measurement
 - Evaporator & condenser capacity validation
 - Multi-climate scenarios: –15 °C to +45 °C
 - Defrost cycle optimization
 - Condensation & frosting behavior
 - Compressor and electronic control algorithm tests

This infrastructure enables optimization for both low energy consumption and high thermal recovery.

Acoustic Testing – ISO 3741 / ISO 3744

- Acoustic validation is performed for all fans, AHUs, and HRV/ERV systems:
- Sound power level
 - Frequency band distribution (63–8,000 Hz)
 - Casing vibration analysis
 - Structural resonance measurements

General Contributions to R&D Processes

- Development of new product families from zero
- Enhanced aerodynamic designs
- Energy efficiency optimization
- Project-specific performance validation
- CE, ATEX, GOST, EN certification preparation
- CFD / FEM simulation support
- Mechanical design — casing insulation — material R&D
- Production-to-mass-manufacturing transition validation

9. Manufacturing Technologies and Capacity

NOVVES utilizes high-precision manufacturing methods, automation systems, and internationally certified quality assurance processes in the production of industrial fans, jet fans, HVAC equipment, and motor technologies. All production processes are managed through an integrated manufacturing chain consisting of sheet metal processing, mechanical assembly, motor production, surface finishing, electrical testing, and final quality verification steps.

9.1. Sheet Metal Processing Technologies

NOVVES The NOVVES manufacturing infrastructure enables high-precision production of all metal components — from heavy-duty industrial fan housings to precision duct-type casings and jet fan bodies. Core technologies used:

- Fiber Laser Cutting Systems (high speed, low tolerance, clean cutting quality)
- CNC Press Brake Bending (multi-axis precision bending, ±0.2 mm tolerance)
- Cylindrical Rolling Systems (axial housings and nozzle manufacturing)
- MIG / TIG Welding Lines (steel – stainless – aluminum)
- Laser Welding Technology (low heat-affected zone, high sealing performance)
- Robotic Welding Systems (repeatable and low-error manufacturing)

Thanks to this infrastructure, NOVVES can serially produce high-strength, industrial-grade fan housings with F200–F400 temperature resistance and suitability for harsh environments.

9.2. Painting, Coating & Corrosion Resistance

NOVVES surface preparation and coating technologies ensure long service life, outdoor durability, and high-temperature resistance. Methods used:

- Electrostatic Powder Coating Line
- Epoxy–Polyester Hybrid Coating
- C4 / C5-M Industrial Corrosion Protection
- Sandblasting & Surface Preparation Processes
- Corrosion & Salt Spray Tests (ISO 9227)
- Color, Coating Thickness & Adhesion Tests

These processes provide critical durability for fire-rated fans, marine applications, tunnel ventilation systems, and industrial facilities.

**NOVVES brings
engineering to airflow.**

“A Note for History: The Character of Production”

For me, quality begins on the drawing board, but it earns its true character in the field.

Because the real strength of a factory lies not first in its machines, but in its discipline; not in its capacity, but in the standards it sets.

At **NOVVES**, we do not see any component on the production floor as merely a piece of metal or a number. Each one comes to life with precise measurements, defined tolerances, and—most importantly—a great sense of responsibility. In our working culture, no product is ever considered “finished” by assumption.

Managing a factory is not only about managing production; it is about managing a whole that brings people, safety, and continuity together.

I know that true quality is not the result of coincidence, but of correct practices repeated with the same seriousness every day. This discipline is the most tangible signature we leave for the future.

Aykut GÜVEN

Factory Manager

Built with Precision. Proven on the Field.

Born to flow

9.3. Mechanical Assembly & System Integration

- Axial fan assembly line
- Jet fan assembly line
- Air handling unit (AHU) assembly line
- Ventilation damper assembly line
- EC/AC motor integrations
- Nozzle, casing, and cell construction assembly
- Coupled and direct-drive system assemblies
- Impeller assembly & dynamic balancing workshop

Every product is digitally tracked through MES software with: Work orders, BOM data, torque values and quality criteria.

9.4. Motor Production and Electrical Manufacturing Processes

NOVVES' in-house motor manufacturing infrastructure includes:

- Rotor/stator pressing and insulation
- Winding and resin impregnation
- Housing and shaft machining
- Servo and BLDC motor driver integration
- Insulation resistance, leakage, and high-voltage tests
- Loaded performance verification

This capability makes NOVVES both a fan manufacturer and a motor technology developer.

9.5. Quality Control and Test Systems

Every stage of production is validated through ISO-compliant control processes. **NOVVES** Quality Assurance System Includes: Product Tests, airflow-pressure measurement, Jet fan thrust testing (N), motor load testing, noise level measurement, vibration analysis, Incoming / In-Process / Final Inspections, Sheet metal certification control, Coating and corrosion tests, Weld penetration inspections, Assembly torque & dimensional verification, ISO 9001 -Aligned Process Management, Product Traceability, LOT, serial number, QR-based tracking, External Laboratory Validation, TSE, Efectis, accredited certification bodies

NOVVES' quality philosophy is not limited to compliance with standards — it is built on the principle that every product must operate flawlessly in the field for many years.

10. Product Groups

01 – AIR MOVEMENT

Dragonfly (Smoke and Heat Exhaust Fans), Marlin (Axial Fans), Bear (ATEX Explosion-Proof Fans), Nautilus (Industrial Scroll/Centrifugal Fans), Hummingbird (EC Fans), Heron (Roof Fans), Owl (Wall-Mounted Fans), Seahorse (Bathroom/WC Fans), Koi (Duct Fans), Turtle (Housed Plug Fans), Butterfly (Kitchen Fans), Fox (Shelter Fresh Air Fans), Chicken (Poultry House Fans), Elephant (Dust Collection Systems).

02 – CLIMATE CONTROL (HVAC)

Tiger (Air Handling Units – AHUs), Dolphin (Dehumidification Units), Caracal (Heat Recovery Units – HRV/ERV).

03 – COOLING AND HEATING

Chiller (Water Chiller Units), Outdoor Units (for Cold Rooms and Air Handling Units), Indoor Units (Evaporator Systems), Electric Heater (Electric Coil Systems), Hot Water Heater (Hot Water Coil Systems).

04 – AIR MANAGEMENT

Hound (Fire, Smoke and Air Control Dampers).

05 – AIR DISTRIBUTION

Alpaca (Grilles, Louvers, Diffusers, and Anemostats).

06 – AIR FILTRATION

Scallop (ISO 16890-Compliant Filters).

07 – ACCESSORIES

Remora (Counter Flanges, Reducers, and Connection Elements).

08 – AUTOMATION COMPONENTS

PANO (Control Panels), PLC (Programmable Logic Controllers), Sensors (Temperature/Pressure/Smoke/Speed Sensors), Control Boards & Switches (EC Fan Control Boards and Selector Switches), Power Electronics (Inverters, BLDC Drives, MOSFET Modules).

09 – VIBRATION & ACOUSTIC ISOLATION

Roo (Vibration Isolators and Acoustic Isolation Components).

11. Certification & Management Systems

NOVVES, guarantees the compliance of its products with international standards through a robust certification infrastructure covering the European Union, the United Kingdom, the Eurasian Economic Union, and Middle Eastern markets. Our production facility has been verified by independent bodies for both management systems and product performance standards.

11.1. Integrated Management Systems

NOVVES, operates under an integrated management system certified by BSI:

- **ISO 9001:2015 – Quality Management System**

BSI FM 805882

The scope includes production, R&D, engineering, sales, testing, and commissioning activities.

- **ISO 14001:2015 – Environmental Management System**

BSI EMS 805883

Covers environmental impact management, energy usage, and sustainable production processes.

- **ISO 45001:2018 – Occupational Health & Safety Management System**

BSI OHS 805884

Ensures safe working conditions, risk management, and employee health protection processes.

11.2. CE – UKCA – UL Compliance

CE (EU) Declaration of Conformity

NOVVES fan and HVAC products carry the CE marking under the following directives: Machinery Safety (2006/42/EC), Low Voltage Directive (2014/35/EU), EMC Directive

Example document:

Industrial Fans – CE Declaration of Conformity
(duct fans, roof fans, EC fans, shelter fans, Ex-proof fans)

UKCA (United Kingdom)

All product families covered under CE compliance are supported by technical documentation aligned with UKCA regulations.

11.3. EAC (Eurasian Economic Union) Declarations of Conformity

NOVVES products are registered with EAC Declarations of Conformity for the markets of Kazakhstan, Russia, Belarus, Kyrgyzstan, and Armenia.

- **EAC – Axial & Radial Fans**

Covers all fan series including Dragonfly, Marlin, Bear, Hummingbird, Koi, Turtle, Owl, Heron, Seahorse, Nautilus.

- **EAC – Electric Heaters**

Duct-type heaters used in Caracal (HRV/ERV) and Tiger air handling unit applications.

- **EAC – Flanges & Flexible Connections**

All fan connection flanges and flexible connectors.

- **EAC – Hound Damper Series**

Fire dampers, smoke dampers and pressure relief/balancing dampers.

- **EAC – Silencers & Fan Mounting Feet (Out of Scope)**

For silencers and fan support feet, EAC certification is not mandatory.

11.4. EN 12101-3 – F300 / F400 Smoke Exhaust Fan Certificates

NOVVES axial, radial and jet fans are certified under CPR in F300 and F400 classes by Notified Body 2184 (Efectis Era Avrasya).

The following product groups are approved as F300 60 / F400 120:

- **Axial Cased Fans**

Diameters from 315 mm to 1600 mm

- **Axial Jet Fans**

Diameters from 315 mm to 1250 mm

- **Axial Roof Fans**

Diameters from 315 mm to 1600 mm

- **Radial Jet Fans**

High-temperature-resistant radial jet fan solutions.

All certificates document:

- Product characteristics
- Motor class (IP55), insulation class (H)
- Housing and impeller materials
- Tested speed, diameter and blade quantities

11.5. ATEX – Explosion-Proof Axial and Radial Fan Certificates

The NOVVES BEAR series axial and radial explosion-proof fans are ATEX-certified for use in both gas and dust atmospheres in categories II 2G / II 2D.

Applicable standards:

- EN 14986:2017 – Design requirements for fans operating in explosive atmospheres
- IEC / EN 60079-0:2018 – General ATEX standard for electrical equipment
- ISO / EN 80079-36:2016 – Non-electrical ATEX “Ex h” standard for mechanical equipment

Certificate numbers:

Axial EX Fans – IEP24ATEX1342X, Radial EX Fans – IEP24ATEX1343X

Protection types included in the certificates:

II 2G Ex db or eb IIC T4 Gb (flameproof/enhanced safety protection for Zone 1, gas group IIC, temperature class T4); II 2D Ex tb IIIB T130°C Db (dust-tight enclosure for Zone 21, dust group IIIB, 130°C surface temperature); II 2G Ex h IIC T4 Gb / II 2D Ex h IIIB T130°C Db (“Ex h” non-electrical ATEX conformity for the entire fan assembly)

With this classification, NOVVES provides officially documented full protection of both the motor and the fan assembly for explosive atmospheres.

11.6. Information Security (ISO/IEC 27001 – Referenced System)

NOVVES, manages the security of R&D outputs, test reports, certification files, project documents, and customer data according to the principles of ISO/IEC 27001:2022 Information Security Management System (ISMS).

The implemented security architecture includes:

- Corporate data classification
- Secure access control and authorization
- Secure file and test report management
- Supplier and external laboratory data security
- Backup, archiving, and incident management
- Risk and process management aligned with the 2022 revision

The following requirements introduced or reinforced by ISO/IEC 27001:2022 are actively implemented:

- Cloud security
- Supply chain security
- Configuration management
- Physical security enhancements

12. Corporate Responsibility, People and Society

NOVVES is an engineering company that places equality, inclusion, and equal opportunity at the core of its working culture. We see women's employment not just as a target, but as a strategic value that strengthens the company's growth and decision-making mechanisms.

- **Equal Pay Policy**

For all positions, the principle of equal pay for equal work is applied between male and female employees.

- **Women in Leadership – 80% Management Representation**

80% of management positions at NOVVES are held by women.

This ratio is significantly above the sector average and is a direct result of the company's inclusive leadership culture.

- **Target to Increase Female Employment**

Active recruitment policies are implemented to increase female representation across all blue-collar, white-collar, engineering, and administrative roles.

- **Safe and Supportive Work Environment**

Employee health, psychological safety, and physical security are managed in alignment with ISO 45001.

Dedicated, safe, and supportive practices have been designed for women employees.

- **Zero Tolerance for Harassment & Mobbing**

Absolute zero tolerance is applied to all forms of harassment, mobbing, discrimination, and psychological violence.

Confidential reporting channels and rapid response mechanisms are actively maintained.

- **Career Development Program for Women Engineers**

Mentoring, technical training, leadership development, and international project participation opportunities are provided for both junior and senior women engineers.

NOVVES places strategic importance on strengthening women in technical disciplines.

13. Occupational Health and Safety (OHS)

NOVVES operates under an ISO 45001:2018-compliant Occupational Health and Safety Management System that places employee health and safety at the heart of all operations. From production lines to R&D laboratories, from on-site installation to commissioning, every stage is managed through systematic risk analysis and preventive safety procedures.

- **ISO 45001 – Aligned Integrated Safety System**

Hazard identification, risk assessment, emergency planning, and continuous improvement processes are carried out in line with international standards.

- **Safe Production Infrastructure**

On laser cutting, welding, assembly, balancing, testing, and painting lines, machine guards, sensor-based safety systems, lockout-tagout (LOTO) procedures, and personal protective equipment (PPE) are mandatory.

- **Employee Health & Ergonomics**

Regular screenings are conducted to prevent ergonomic risks during long-term operations. Workstations are ergonomically optimized.

- **Training & Awareness Programs**

All employees are regularly trained in:

- **Basic occupational safety**
- **Fire and emergency drills**
- **Chemical safety (MSDS)**
- **Electrical safety & lockout procedures**
- **Visitor and Supplier Safety**

All visitors and suppliers entering the facility receive a safety briefing upon arrival.

Risks related to noise, working at height, and confined spaces are tightly controlled.

- **Continuous Monitoring & Audits**

OHS performance is monitored through regular internal audits.

A culture of continuous improvement is adopted with the aim of achieving zero accidents.

14. Ethical Clauses in Contracts and Distribution Agreements

NOVVES enforces strict anti-corruption clauses in all distribution, dealership, representation, and supplier agreements.

- If bribery, commission abuse, or improper incentives are detected, the agreement is immediately and unilaterally terminated.
- The relevant party cannot claim any rights, compensation, or financial demands.
- Ethical violations may be reported to legal authorities and competent institutions.
- Business partners who act contrary to international anti-corruption regulations are permanently removed from the company's supply chain.

NOVVES Ethical Approach: Reliable Engineering, Reliable Business Ethics

For **NOVVES**, ethics is not just a policy; it is the cultural foundation of product quality, engineering integrity, and long-term business relationships. Transparency, trust, and professional responsibility are inseparable elements of all our commercial and technical processes.

15. Partnerships&Ecosystem

15.1. Distribution Structures (MDA – NDA – Dealer)

In international sales and project management, **NOVVES** offers different distribution models tailored to market needs: Master Distributor Agreement (MDA), National Distributor Agreement (NDA), Dealer Level Agreements. These models are structured based on market access, pricing, stock management, and technical support scope. All distributors are selected according to performance, transparency, and technical competence criteria.

15.2. OEM – ODM Collaborations

NOVVES, cooperates with global manufacturers under OEM (Original Equipment Manufacturer) and ODM (Original Design Manufacturer) models. Custom-designed fans, motors, modules or HVAC components can be developed under the customer's brand. Performance curves, housing geometries, material options, and certification processes can be tailored to project requirements.

15.3. Partner Ecosystem

We maintain a broad partner ecosystem consisting of engineering firms, design offices, system integrators, and contracting companies.

NOVVES supports partners with:

- Technical training
- Product certification support
- Project selection software (PerfectusAir)
- Engineering consultancy

This makes **NOVVES** a reliable solution partner at every stage of the project.

15.4. Warranty & Service

All **NOVVES** products are backed by warranty conditions aligned with international standards.

Our service policy is based on: Rapid response, Genuine spare parts, Technical expert support, Assured operational continuity throughout the product lifecycle. Both in Türkiye and abroad, service and maintenance agreements are offered in line with project scale and criticality.

“

For us, quality is not a coincidence; it is the natural result of a systematic process.

15.5. Communication & Digital Ecosystem

15.5.1. Factory & Office Information

NOVVES Elektrik Motor A. Ş., carries out its production, R&D, and management activities at its modern facility in Yalova. The plant is an integrated production center that brings together sheet metal processing lines, motor production, assembly and balancing lines, AMCA 210/250 test laboratories, painting, packaging, and logistics operations under one roof.

Factory & R&D Center

NOVVES Elektrik Motor A.Ş. – Production Facility
